CP1E-E□D□-A

CP1E-N□D□-□

The CP1E Package PLCs: Economy, Easy, and Efficient

- The E-type Basic CPU Units provide cost performance and easy application with only basic functionality.
- The N-type Application CPU Units support Programmable Terminal connection, position control, and inverter connection

CP1E-E20DR-A **NEW**CP1E-N40DR-A **NEW**

Features

- Programming, setting, and monitoring with CX-Programmer.
- Easy connection with computers using commercially available USB cables
- Expansion I/O Units can be used to increase the I/O capacity of a CPU Unit (for CPU Units with 30 or 40 I/O points).
- Expansion Units can be used to add analog I/O or temperature inputs to a CPU Unit with 30 or 40 I/O points.
- Quick-response inputs
- Input interrupts
- Extensive high-speed counter functionality.
- Versatile pulse control (Models with transistor outputs only).
- Execution of origin searches and origin returns using instructions (Models with transistor outputs only).
- PWM output function (Models with transistor outputs only).
- Changing settings with the analog adjusters.
- Built-in RS-232C port on N-type CPU Units.
- A Serial Option Board can be added to N-type CPU Units with 30 or 40 I/O points.

Battery Set 	For N-type CP1E CPU Units Note: Mount a Battery to an N-type CPU Unit if the data in the following areas must be backed up for power interruptions. DM Area (D) (except backed up words in the DM Area), Holding Area (H), Counter Completion Flags (C), Counter Present Values (C), Auxiliary Area (A), and Clock Function (Use batteries within two years of manufacture.)									CP1W-BAT01 <u>NEW</u>	CE

Note: There are no accessories included with N-type CP1E CPU Units. RS-232C connectors for the built-in RS-232C port and the Battery (CP1W-BAT01) are not included.

Options (for N-type CP1E CPU Units with 30 I/O Points or 40 I/O Points)

The Options cannot be used for N-type CPU Units with 20 I/O points and all E-type CPU Units.

Product name	Specifications	Model	Standards
RS-232C Option Board 	One RS-232C Option Board can be mounted to the Option Board slot. For N-type CP1E CPU Units with 30 I/O Points or 40 I/O Points only. One RS-232C connector is included.	CP1W-CIF01	UC1, N, L, CE
RS-422A/485 Option Board 	One RS-422A/485 Option Board can be mounted to the Option Board slot. For N-type CP1E CPU Units with 30 I/O Points or 40 I/O Points only.	CP1W-CIF11	
RS-422A/485 Isolated-type Option Board 		CP1W-CIF12	N, L, CE

Note: It is not possible to use a CP-series Ethernet Option Board (CP1W-CIF41), LCD Option Board (CP1W-DAM01), or Memory Card (CP1W-ME05M) with a CP1E CPU Unit.

	EMC Immunity Level	Zone B	
	Vibration resistance	Conforms to JIS 60068-2-6. 5 to 8.4 Hz with 3.5-mm amplitude, 8.4 to 150 Hz Acceleration of 9.8 m/s ² for 100 min in X, Y, and Z directions (10 sweeps of 10 min each = 100 min total)	
	Shock resistance	Conforms to JIS 60068-2-27. 147 m/s ² , 3 times in X, Y, and Z directions	
Terminal block		Fixed (not removable)	
Terminal screw size		M3	
Applicable standards		EC Directive	
Grounding method		Ground to 100 Ω or less.	

* 1 Total of 110 mm with mounting brackets.

* 2 Excluding cables.

* 3 Use the external power supply to power input devices. Do not use it to drive output devices.

* 4 This is the rated value for the maximum system configuration. Use the following formula to calculate power consumption for CPU Units with DC power.

Formula: DC power consumption = (5V current consumption × 5 V/70% (internal power efficiency) + 24V current consumption) × 1.1 (current fluctuation factor)

The above calculation results show that a DC power supply with a greater capacity is required.

Operating modes			PROGRAM mode: Program execution is stopped. Preparations can be executed prior to program execution in this mode. MONITOR mode: Programs are executed. Some operations, such as online editing, and changes to present values in I/O memory, are enabled in this mode. RUN mode: Programs are executed. This is the normal operating mode.					

Function Specifications

Function				Function description	
Cycle time management	Minimum cycle time			Makes the cycle time consistent.	
	Monitoring the cycle time			Monitors the cycle time.	
CPU Unit built-in functions	Inputs	High-speed counter inputs	High-speed pulse inputs		High-speed pulses from devices such as a rotary encoder are counted. The counted values are stored in the Auxiliary Area. Interrupt tasks can be executed when target is reached or by range comparison.
			Input pulse frequency measurement		The frequency of pulses input by the PRV instruction is measured.
		Interrupt inputs			Relevant interrupt tasks are executed during the cycle when the CPU Unit built-in inputs turn ON or turn OFF.
		Quick-response inputs			Inputs can be read without being affected by cycle time. Use the quick-response inputs to read signals shorter than the cycle time.
		Normal inputs	I/O refreshing	Cyclic refreshing	The CPU Unit's built-in I/O are cyclically refreshed.
				Immediate refreshing	I/O refreshing by immediate refreshing instructions

		No-protocol communications			I/O instructions for communications ports (TXD/RXD instructions) can be used for data transfer with peripheral devices such as bar code readers.
		NT Link communications			I/O memory in the PLC can be allocated and directly linked to various PT functions, including status control areas, status notification areas, touch switches, lamps, memory tables, and other objects.
		Serial PLC Links			Up to ten words per Unit can be shared by up to nine CPU Units, including one Polling Unit and eight Polled Units. Note: Programmable Terminal (PT) cannot be connected.
		Modbus-RTU Easy Master function			Modbus-RTU commands are sent by the Modbus-RTU Master function. Modbus slaves, such as inverters, can be easily controlled with serial communications.
Interrupt	Scheduled interrupts			Tasks can be executed at a specified interval (1.0 ms min., Unit: 0.1 ms).	
	Interrupt inputs			Interrupt tasks are processed when the built-in input turns ON or OFF.	
	High-speed counter interrupts			This function counts input pulses with the CPU Unit's built-in high-speed counter and executes an interrupt task when the count reaches the preset value or falls within a preset range (target value or zone comparison).	

Function			Function description		
Power supply management	Memory protection		Holding Area data, DM Area data, EM Area data, Counter Completion Flags, and counter present values are held even when power is turned OFF. This function can be used only with an N-type CPU Unit and only when the Battery Set (sold separately) is mounted.		
	Number of power interruptions counter		The number of times power has been interrupted is counted.		
Debugging	Online editing		The program can be changed during operation in MONITOR mode or PROGRAM mode.		
	Force-set/reset		Specified bits can be set or reset.		
	Differentiate monitoring		ON/OFF changes in specified bits can be monitored.		
	Storing the stop position at errors		The location and task number where execution stopped for a program error is recorded.		
	Program check		The programs can be checked for items such as no END instruction and FALS/FAL errors at startup.		
Self-diagnosis and restoration	Error Log		Details and the time of occurrence of error codes predefined by the CPU Unit are stored.		
	CPU error detection		CPU Unit WDT errors are detected.		
	User-defined failure diagnosis		Errors can be generated for user-specified conditions: Non-fatal errors (FAL) and fatal errors (FALS).		
	Load OFF function		The built-in outputs, Expansion I/O Unit outputs, and Expansion Unit outputs are turned OFF.		
	Non-fatal error detection	System FAL error detection (User-defined non-fatal error)		This function generates a non-fatal (FAL) error when the user-defined conditions are met in program.	
		Backup memory error detection		This function detects when data in the backup memory (built-in EEPROM) that stores the ladder program is corrupted.	
		PLC Setup error detection		This function detects setting errors in the PLC Setup.	
		Option Board errors		This function detects when the Option Board is malfunctioning or disconnected.	
		Battery error detection (N-type CPU Units only)		This function detects when the battery voltage is low or the battery is disconnected. Note: This function is valid only when a battery is mounted and the Do not detect battery error Check Box is cleared in the PLC Setup.	
	Fatal Error Detection	Memory error detection		This function detects errors that occur in memory of the CPU Unit.	
		I/O bus error detection		This function detects errors that occur during data transfer between the CPU Unit and another Unit.	
		Too Many I/O Points Error Detection		This function detects when more than the maximum number of CP1W Expansion I/O Units and Expansion Units are connected to the PLC.	
		Program error detection		This function detects when there is an error in the program. See the following for details.	
		Instruction processing error detection	Instruction processing error detection		This function detects an error when the given data value is invalid when executing an instruction, or execution of instruction between tasks was attempted.
			Indirect DM addressing BCD error		This function detects an error when an indirect DM/EM address in BCD mode is not BCD.
			Illegal area access error detection		This function detects an error when an attempt is made to access an illegal area with an instruction operand.
			No END error detection		This function detects an error when there is no END instruction at the end of the program.
			Task error detection		The execution condition for an interrupt task was met but there is no interrupt task with the specified number.
			overflow error detection		This function detects an error when too many differentiated instructions are entered or deleted during online editing (131,072 times or more).
			Invalid instruction error detection		This function detects an error when an attempt is made to execute an instruction that is not defined in the system.
User program area overflow error detection			This function detects an error when instruction data is stored after the last address in user program area.		
Cycle time exceeded error detection			This function monitors the cycle time (10 to 1,000 ms) and stops the operation when the set value is exceeded.		
System FALS error detection (user-defined fatal error)		This function generates a fatal (FALS) error when the user-defined conditions are met in program.			
Maintenance		Automatic online connection via network		This function enables automatically connecting to the PLC online when the CX-Programmer is directly connected by a serial connection (peripheral USB port or serial port).	
Security functions	Read protection using password		This function protects user memory. Read protection: Set a password using the CX-Programmer. Overwrite protection is not provided.		
	Write protection from FINS commands		This function prohibits writing by using FINS commands sent over the network.		

Internal Memory in the CPU Units

CPU Unit Memory Backup

As shown in the following diagram, the internal memory in the CPU Unit consists of built-in RAM and built-in EEPROM. The built-in RAM is used as execution memory and the built-in EEPROM is used as backup memory.

●Precautions for Correct Use

Create a system and write the ladder programs so that problems will not occur in the system if the data in these areas may be unstable.

- Data in areas such as the DM area (D), Holding Area (H), the Counter Present Values (C) and the status of Counter Completion Flags (C), which is retained by the battery, may be unstable when the power supply is turned off (Except for the DM area that are retained by the built-in EEPROM using the Auxiliary Area bit.)
- The error log, and clock data (N-type CPU Unit only) in the Auxiliary Area will become unstable. Other words and bits in the Auxiliary Area will be cleared to their default values.

The built-in capacitor's backup time varies with the ambient temperature as shown in the following graph.

I/O Memory Areas

Data can be read and written to I/O memory from the ladder programs. I/O memory consists of an area for I/O with external devices, user areas, and system areas.

I/O Memory Areas

Name		No. of bits	Word addresses	Remarks
CIO Area	Input Bits	1,600 bits (100 words)	CIO 0 to CIO 99	--
	Output Bits	1,600 bits (100 words)	CIO 100 to CIO 199	--
	Serial PLC Link Words	1,440 bits (90 words)	CIO 200 to CIO 289	--
Work Area (W)		1,600 bits (100 words)	W0 to W99	--
Holding Area (H)		800 bits (50 words)	H0 to H49	Data in this area is retained during power interruptions if a Battery Set (sold separately) is mounted to an N-type CPU Unit.
Data Memory Area (D)	E-type CPU Unit	2 Kwords	D0 to D2047	Data in specified words of the DM Area can be retained in the built-in EEPROM in the backup memory by using a bit in the Auxiliary Area. Applicable words: D0 to D1499
	N-type CPU Unit	8 Kwords	D0 to D8191	Data in specified words of the DM Area can be retained in the built-in EEPROM in the backup memory by using a bit in the Auxiliary Area. Applicable words: D0 to D6999
Timer Area (T)	Present values	256	T0 to T255	--
	Timer Completion Flags	256		--
Counter Area (C)	Present values	256	C0 to C255	Data in this area is retained during power interruptions if a Battery Set (sold separately) is mounted to an N-type CPU Unit.
	Counter Completion Flags	256		--
Auxiliary Area (A)	Read only	7168 bits (448 words)	A0 to A447	Data in this area is retained during power interruptions if a Battery Set (sold separately) is mounted to an N-type CPU Unit.
	Read-write	4,896 bits (306 words)	A448 to A753	
Temporary Area (TR)		16 bits	TR0 to TR15.	--

Backing Up and Restoring DM Area Data

The contents of the DM Area (D) will become unstable if the power supply is interrupted for longer than the backup time of the built-in capacitor for an N-type CPU Unit without a Battery or for an E-type CPU Unit.

The contents of the specified words in the DM Area data can be backed up from RAM to the built-in EEPROM backup memory during operation by turning ON a bit in the Auxiliary Area. The number of DM Area words to back up is specified in the Number of CH of DM for backup Box in the PLC Setup. If the Restore D0- from backup memory Check Box is selected in the PLC Setup, the backup data will automatically be restored to RAM when the power is turned back ON so that data is not lost even if power is interrupted.

Conditions for Executing Backup

Specified words starting from D0 in the RAM can be saved to the built-in EEPROM backup memory by turning ON A751.15.

(These words are called the DM backup words and the data is called the DM backup data.)

A751.15 (DM Backup Save Start Bit) can be used in any operating mode (RUN, MONITOR, or PROGRAM mode).

Words That Can Be Backed Up

- E-type CP1E CPU Units: D0 to D1499
- N-type CP1E CPU Units: D0 to D6999

Number of Words To Back Up

The number of words to back up starting from D0 is set in the Number of CH of DM for backup Box in the Startup Data Read Area in the PLC Setup.

Restoring DM Backup Data to RAM When Power Is Turned ON

The DM backup data can be restored to RAM when power is turned ON by selecting the Restore D0- from backup memory Check Box in the Startup Data Read Area in the PLC Setup.

The screenshot shows the 'Startup Data Read' dialog box. It contains two checkboxes: 'Clear retained memory area(HR/DM/CNT)' and 'Restore D0- from backup memory'. The 'Restore D0- from backup memory' checkbox is checked. Below it, there is a text box for 'The retained memory value becomes irregular when running without battery.' and a numeric input field for 'Number of CH of DM for backup' set to '0'. At the bottom, there are two lines of text: 'E type : Max 1500CH D0-D1499' and 'N type : Max 7000CH D0-D6999'.

Restrictions on External Power Supply Capacity

The following restrictions apply when using the CPU Unit's external power supply.

●CPU Unit with 30 or 40 I/O Points

It may not be possible to use the full 300 mA of the external power supply when connecting a CP-series Expansion I/O Unit or CP-series Expansion Unit because the power supply capacity is restricted for CPU Units with 30 or 40 I/O points. The entire 300 mA from the external power supply can be used if Expansion Units and Expansion I/O Units are not connected. Refer to the CP1E CPU Unit Hardware Manual (Cat. No. W479) for details.

●CPU Unit with 20 I/O Points

There is no external power supply on CPU Units with 20 I/O points.

●Analog Input Units

Model		CP1W-AD041	
Item		Voltage Input	Current Input
Number of inputs		4 inputs (4 words allocated)	
Input signal range		0 to 5 VDC, 1 to 5 VDC, 0 to 10 VDC, or -10 to 10 VDC	0 to 20 mA or 4 to 20 mA
Max. rated input		±15 V	±30 mA
External input impedance		1 MΩ min.	Approx. 250 Ω
Resolution		1/6000 (full scale)	
Overall accuracy	25°C	0.3% full scale	0.4% full scale
	0 to 55°C	0.6% full scale	0.8% full scale
A/D conversion data		16-bit binary (4-digit hexadecimal) Full scale for -10 to 10 V: F448 to 0BB8 Hex Full scale for other ranges: 0000 to 1770 Hex	
Averaging function		Supported (Set in output words n+1 and n+2.)	
Open-circuit detection function		Supported	
Conversion time		2 ms/point (8 ms/all points)	
Isolation method		Photocoupler isolation between analog I/O terminals and internal circuits. No isolation between analog I/O signals.	
Current consumption		5 VDC: 100 mA max.; 24 VDC: 90 mA max.

Connecting to Support Software

Operating Environment and System Configuration

The following system is required to operate the CX-Programmer. Make sure your system provides the following conditions and has the necessary components.

Item	Description
Supported computer	IBM PC/AT or equivalent
CD-ROM or DVD-ROM drive	One or more
Supported Operating Systems	Windows Vista, Windows XP, Windows 2000 (Service Pack 2 or later)
CPU	Pentium II 333 MHz or faster
RAM	256 MB min. 512 MB or more recommended
Available hard disk space	600 MB min.
Display	800 x 600 SVGA min.
PLC and connection port	USB port

Connecting Methods

Using commercially available USB cable, connect the CX-Programmer to the peripheral USB port on the CPU Unit.

Note: The CX-Programmer cannot be used if it is connected to the built-in RS-232C port or serial option port of a CP1E CPU Unit.
* Commercially available USB cable: 5 m max., for USB 2.0.

Connecting Cable

Use the following cable to connect the CP1E CPU Unit to the computer running the Support Software.

Port at Unit	Port at computer	Network type (communications mode)	Model numbers	Length	Remarks
Peripheral USB port	USB port	USB 2.0 (or 1.1)	Commercially available USB cable (A connector - B connector)	Less than 5 m	--

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the product in the customer's application or use of the product.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.
